

Postoperative and trauma care in children – new from DARCO.

A minor fall – this time he didn't get off so lightly – and the child and his parents are facing a major endurance test: four to six weeks in plaster or a bandage! What now...?

SlimLine™ PED

MedicalSurgical™ PED
Paediatric bandage shoe

- > for the complete foot area
- > shock-absorbing action
- > suitable for larger bandages
- > removable insole to enable modification and reduce pressure (black model)
- > fits either foot

After thorough examination and diagnosis of the injury or the fracture, healing and optimum aftercare of the child's foot have top priority.

A key feature – especially in children – is the best possible care, taking into account the child's natural desire to be active.

Now, to complement the specially-developed paediatric cast shoe, DARCO has brought a paediatric bandage shoe onto the market in the field of postoperative and trauma care of the paediatric foot.

SlimLine™ PED

The paediatric cast in particular is often subjected to great stress. The SlimLine™ cast boot is ideal protection from rapid wear and soiling. Naturally the characteristics and features of the tried and tested adult model have been incorporated. Wearing the paediatric shoe also ensures a physiologically correct gait.

The young patient can thus walk more easily without walking sticks, and get along at home, at nursery or at school.

MedicalSurgical™ PED

Paediatric surgery is a separate field with a specific spectrum in medical care. DARCO has adapted to meet the needs of the paediatric foot. The MedicalSurgical™ bandage shoe is now also available in a paediatric size. It goes without saying that the proven construction and quality of the adult shoe have not been compromised.
